+ Követés

"The internet never forgets" turned out to be literally true.
Deleting something is just not enough...

Google's AI just quoted deleted posts, word for word, from accounts that no longer exist.

A user called u/HugeScore3150 deleted their Reddit account. Deleted and banned. Wanted it gone completely. Did everything right.

Then they ran a test.

Asked Google's AI Overview a question. The answer came back quoting their deleted posts. Word for word. From r/GoogleGeminiAI, r/gdpr, r/LinusTechTips. From an account that no longer exists.

So they confronted the AI directly.

It confessed. Literally said: "In previous searches, I was still able to retrieve the links and texts of the r/gdpr, r/LinusTechTips, and r/GoogleGeminiAI subs from Google's cache."

The AI knew the account was gone from live Reddit. It said so. And it quoted the posts anyway.

Google's pipeline already had it. Already processed it. Already linked it to everything else you've ever said online. Your delete request showed up after the party was over.

That's just how the system works. There's no bug to report.

GDPR says you have the right to be forgotten. CCPA says the same thing in California. Laws with real fines behind them, and regulators who put out press releases every few months about how they're protecting you.

But the data was already gone before you could blink. Gone into a pipeline that doesn't pause, doesn't check what you've requested, doesn't care that you clicked delete three seconds ago.

The law was written for a world where humans were making the calls. Somewhere along the way, that stopped being true, and the law didn't catch up.

So when you delete that old photo, that embarrassing comment from 2019, that rant you posted at 2am and regretted by morning... you're not erasing anything. You're filing a complaint with a machine that already moved on.

You were told you had control. You probably never did.

Go ask Google's AI Overview about something you deleted. See what comes back.

This current LinkedIn post is included in this post:

https://discuss.ai.google.dev/t/you-can-delete-my-posts-but-the-truth-is-out-privacy-experts-on-linkedin-are-now-exposing-google-ai-s-data-fraud/176870.

You can delete my posts, but the truth is out: Privacy experts on LinkedIn are now exposing Google AI's data...
Did Google really think that silently deleting my bug reports would make the GDPR violations disappear? You can try to censor this foru...

Out of curiosity - how long ago was the account deleted? And has this been tested with any other posts/accounts that were deleted a decade ago for example?

In this specific case, the account (u/HugeScore3150) was deleted and banned very recently, just days before the tests. Google AI was still pulling exact quotes and linking identities, Julia.

For decade-old deletions, this particular experiment didn't go b… ...továbbiak
